D is called the discriminant of the given quadratic function, $ax^2 + 2hxy + by^2$. The required conditions may now be stated as follows: The linear factors of a homogeneous quadratic function of two variables are real and unequal, real and equal, or imaginary, according as the discriminant of the function is less than, equal to, or greater than zero, respectively. The same conditions determine the nature of the binomial factors of the complete quadratic function of a single variable, viz. : $ax^2 + 2hx + b$, as may readily be seen by making $y = 1$ in the preceding case. 50. Let us now determine the condition which must be fulfilled in order that a homogeneous quadratic function of three variables may be resolved into two rational linear factors. Every such function may be written in the form $ax^2 + by^2 + cz^2 + 2fyz + 2gzx + 2hxy$. Placing this equal to zero...
